Talks Technology

May 2017

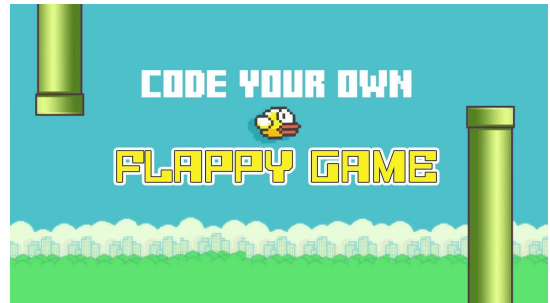

Kindergarten & 1st Grade

Dash and Dot: This month, the students in Kindergarten and 1st Grade will begin to learn block coding using the Wonder Workshop Apps on the iPad. Students will use the block codes to program a sequence of events for our new robots, Dash and Dot. They will create a storyline for the sequence of events that Dash and/or Dot will perform. They also will design and create costumes for the robot to wear during its performance.

2nd & 3rd Grades

Code.org: The 2nd and 3rd graders will be working in code.org to learn more about how programs are created using algorithms. In this unit, students will create programs to solve problems and develop interactive games or stories they can share in our class code.org studio. Students will design and create fun and exciting projects on the computer.

4th & 5th Grades

Mouse Create: There's an app for that! *Or is there???* In this unit, the students will critique some of their favorite apps to see what makes them successful - and then they will design an app of their own. They will learn about the design process as they use Mouse Create to design apps for mobile devices.
